

# nz mastermap

the source of all geographic information

## 4. CONTEXTUAL

NZ MasterMap Contextual is a background layer to give our other layers extra meaning. It comes FREE with any NZ MasterMap purchase.

- NZ MasterMap Contextual layers provide an environment to view other spatial data. The contextual layer contains features that normally appear on topographic maps.
- The standard contextual layer contains hydrological features such as coastline (area), islands (area), major rivers (lines), railway centrelines, populated place names (points and annotation) and the name of major natural features (points and annotation).
- The advanced layer improves on the standard layer by incorporating river areas, attributed railway centrelines and all available named entities.
- The contextual layer gazetteer is available as a separate product with all available named entities with geographic coordinates.
