the source of all geographic information

## 13. HAZARD

New Zealand MasterMap can provide a number of hazard related layers that give an indicative overview of hazard extent within New Zealand. Potential risks to land or property is available from a number of sources.

- These range from earthquake zones, flood plains, crime, and any other data sets that can be derived, or obtained from third party sources that we represent.
- We can provide modelled data indicating flood plains for risk insurance.
- Further data will come to hand related to restricted land use, chemical poisoning, open ponds on land, cliffs, and coastal erosion.
- Many of these layers are under development, or can be derived from other data sets that NZ MasterMap owns, re-sells or manages.
